

COVID-19, Home Price Shrinking and Politics in 2020, U.S.!!!

2020 is an unusual election year. The U.S. has been hit hard by COVID-19. What is the impact of the pandemic on home prices and is partisan composition of state governors a factor that influences pandemic control and housing industry? This map explores the correlation between COVID cases per 100,000 people, contributions to percentage change in GDP (real estate industry) and Democratic/Republican governments on the state level.

This finding is that there is no linear correlation between COVID density and the economic performance of the housing sector although states of most serious COVID infection underperform in housing. Republican-run states show lighter infection. Nevertheless, housing industry is less related to partisan composition of governors.
